

Jardin

The Jardin collection modules are designed to be combined with each other and with other elements from the same line, allowing the creation of integrated furnishing systems for defining and enhancing green areas. The range includes backless seating in shaped Corten steel sheet: model SC (single seat) and SL, as well as SCW and SLW, which feature a WPC (Wood Polymer Composite) seat surface. The angled seats SA and SAW are made from shaped steel sheet as well, with the SAW version featuring a WPC surface. Additional elements include model P, a bike rack made of curved Corten steel sheet; model C, a square litter bin in Corten steel with a rain cover and tilting container; model I, a step light in Corten steel with integrated LED lighting; and model E, an information panel with Corten frame and customizable Inox plate. Finally, linear (B, available in three lengths) and angled (BA) edging modules allow flexible and clean delimitation of green spaces.

Jardin B

Linear border module of Jardin collection in Corten steel. It can be combined with the other elements of the collection to build a system to delimit green spaces, while integrating furniture elements. Antiwashout included.

Variant code: 0200345

Size and weight: Width 980mm
Length 60mm
Weight 10kg
Seat Height 100mm

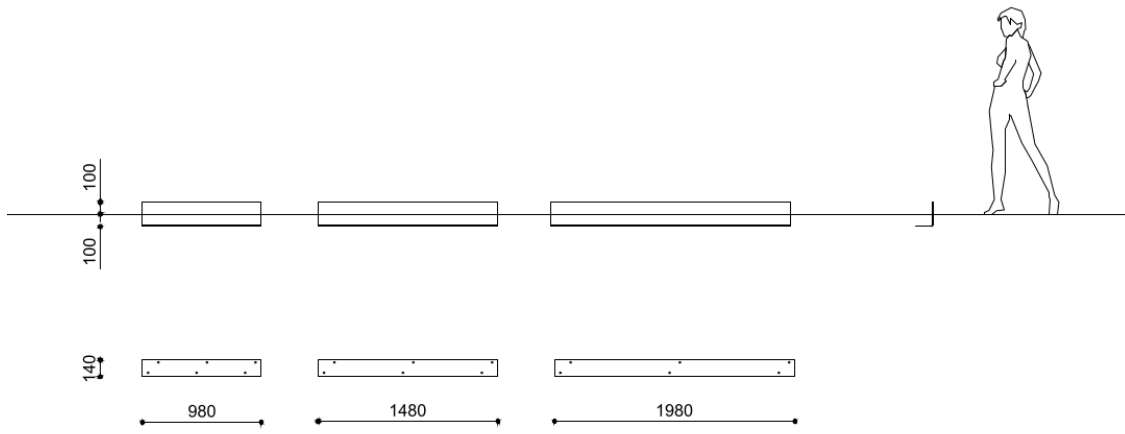

Materials: Corten steel

Finishes: NO

Color:
NO

Fixing: Pre-drilled for anchors

Technical drawing:

CORTEN STEEL

Corten steel is a "living" material, changeable over time, not uniform in appearance and each product has unique shades and colors.

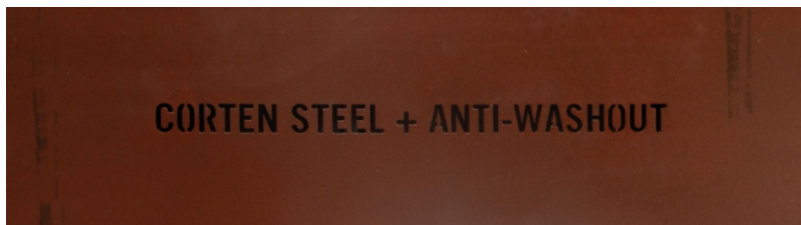

We sandblast our products in Corten steel, before proceeding with the oxidation process, designed to limit water consumption.

To reduce physiological leak of oxide, upon request, antiwashout treatment is available.

In particularly saline environments, Corten steel may have a different reaction, we recommend evaluating the positioning.

OXIDIZED

OXIDIZED PROTECTED WITH ANTIWASHOUT
