

FIBERGLASS

For some products, as an alternative to HPC (High Performance Concrete), Metalco offers fiberglass.

Fiberglass, or GFRP, is a type of plastic reinforced with glass fibers, in the form of non-woven fabric and randomly oriented fiber felt, impregnated with thermosetting resins that harden after processing through the action of a catalyst and an accelerator.

An epoxy primer is applied, followed by a polyurethane paint finish in a colour chosen from Metalco's RAL range.
